Empathy Map

Farmers want a simple and reliable way to identify the most suitable crop for cultivation based on soil nutrients and environmental conditions. They are concerned that choosing the wrong crop may lead to poor yield, financial loss, and inefficient use of resources. Many farmers lack access to expert agricultural guidance and advanced soil analysis. **OptiCrop – AI-Based Crop Recommendation System** reduces this uncertainty by using Machine Learning to analyze soil parameters such as Nitrogen (N), Phosphorus (P), Potassium (K), temperature, humidity, pH, and rainfall, and instantly recommends the most suitable crop.
